Search Notes

Examiner Minnifield,

Here are the results for your recent search request.

Please feel free to contact me if you have any questions about these results.

Thank you for using STIC services. We appreciate the opportunity to serve you.

Sincerely,

Mary Jane Ruhl Technical Information Specialist STIC Remsen 1-A-62 Ext. 22524

rush interference sequence search

Christina,

Please approve, 2 month amdt. due.

STIC

09/942098

Please do an interference sequence search on SEQ ID NO: 1, 2, 30, and aa 187-203 of SEQ ID NO: 2 of this application.

Please do a commercial and interference sequence search on SEQ ID NO: 29, 90-93 and aa 191-202 of SEQ ID NO: 2 of this application.

Please provide a paper printout of all results.

Thanks, Minnifield

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 41, Sequence 1, A Sequence 17, Sequence 27, Sequence 49, Sequence 49, Sequence 27,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6, M. GENERAL INFORMATION:

APPLICANT: Shine, Nancy R.

APPLICANT: Saton, Linda J.

TITLE OF INVENTION: Substrate Peptides and Assays for Detecting and Measuring Proteol)

TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum

FILE REFERENCE: PO10018

CURRENT APPLICATION NUMBER: US/09/976,535A

CURRENT APPLICATION NUMBER: US/09/976,535A

NUMBER OF SEQ ID NOS: 14

SOFTWARE: Patentin version 3.1

FINCE OF TAXABLE PATENTIAL OF TAXAB
Sequence 12, Application US/09976535A
Patent No. 6504006
GRNERAL INFORMATION:
APPLICANT: Shine, Nancy R.
APPLICANT: State, Crawford, Karen R.
APPLICANT: Eaton, Linda J.
TITLE OF INVENTION: Substrate Peptides and Assays for Detecting and Measuring Proteol, TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum FILE REFERENCE: PO10018
CURRENT APPLICATION NUMBER: US/09/976,535A
CURRENT FILING DATE: 2001-10-12
NUMBER OF SEQ ID NOS: 14

Sequence 1, Application US/09976535A
Patent No. 65040ATON:
GENERAL INFORMATION:
APPLICANT: Shine, Nancy R.
APPLICANT: Eaton, Linda
TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum
TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum
TITLE OF INVENTION WUMBER: US/09/976,535A
CURRENT PELLORIC DATE: 2001-10-12
NUMBER OF SEQ ID NOS: 14
SOFTWARE: PatentIn version 3.1
SEQ ID NO 1
LENGTH: 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 11, Application US/09976535A
Patent No. 6504006
GENERAL INFORMATION:
APPLICANT: Shine, Mancy R.
APPLICANT: Crawford, Karen R.
APPLICANT: Eaton, Linda J.
TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum
TITLE OF INVENTION: Activity of Serotype A Neurotoxin from Clostridium botulinum
FILE REFERENCE: P010018
CURRENT APPLICATION UNDER: US/09/976,535A
CURRENT FILING DATE: 2001-10-12
NUMBER OF SEQ ID NOS: 14
SOFTWARE: Patentin version 3.1
SEQ ID NO 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Patent No. 5965699
GENERAL INFORMATION:
APPLICANT: James J. Schmidt
APPLICANT: James J. Schmidt
APPLICANT: Karen A. Bostian
TITLE OF INVENTION: Assay for the Proteolytic Activity of Serotype A Neurotoxin frontomes Properties of September S. 56
CORRESPONDENCE ADDRESS:
ADDRESSER: MCMR-JA Attn:John Moran-Patent Atty
STREET: USA MRMC - 504 Scott Street
CITY: FORT DETRICK
STATE: MARYLAND
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 5, Application US/10261161

Sequence 5, Application US/10261161

Publication No. US20040072270A1

GENERAL INFORMATION:

APPLICANT: Fernandez-Salas, Ester

APPLICANT: Steward, Lance E.

TITLE OF INVENTION: Cell-Based Fluorescence Resonance Energy

TITLE OF INVENTION: Transfer (FRET) Assays For Clostridial Tox:

TITLE OF INVENTION: Transfer (SCI)

CURRENT APPLICATION NUMBER: US/10/261,161

CURRENT FILING DATE: 2002-09-27

NUMBER OF SEQ ID DATE: 2002-09-27

SOFTWARE: FastSEQ for Windows Version 4.0

Publication No. US20050100973A1

GENERAL INFORMATION:

APPLICANT: Steward, Lance E.

APPLICANT: Steward, Marcella A.

APPLICANT: Acki, Kei R.

TITLE OF INVENTION: GFP-SANP25 Fluorescence Release Assay

TITLE OF INVENTION: For Botulinum Neurotoxin Protease Activity

TITLE OF INVENTION: For Botulinum Neurotoxin Protease Activity

CURRENT APPLICATION NUMBER: US/10/917,844

CURRENT PILING DATE: 2004-08-13

PRIOR APPLICATION NUMBER: US 09/942,098

NUMBER OF SEQ ID NOS: 113

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 206
APPLICANT: Steward, Lance E.
APPLICANT: Acki, Kei Roger
TITLE OF INVENTION: Cell-Based Fluorescence Resonance Energy
TITLE OF INVENTION: Transfer (FRET) Assays For Clostridial Toxins
FILE REFERENCE: P-AR 4804
CURRENT APPLICATION NUMBER: US/10/261,161
CURRENT PILING DATE: 2002-09-27
NUMBER OF SEQ ID NOS: 109

sequence 10399, Application US/09949016

patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

PILE REPERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PRESENCE OF WINDOWS Version 4.0

SEQ ID NO 10399

LENGTH: 158
                                                                                                                                                                                                                                                                                          OTHER INFORMATION: Synthetic peptide chosen such that it is cleaved by BONT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                72 KEABKNI, TDI.GKFCGI, CVCPCNKI, KSSDAYKKAWGNNQDGVVASQPARVVDERBQMAISG 131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                         US-09-51-999C-7906

US-09-513-999C-7906

Sequence 7966, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:

APPLICANT: Dundae Milne Edwards, J.B.

APPLICANT: Duclert, A.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

FILE REFERENCE: 59.US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT APPLICATION NUMBER: US 60/122,487

PRIOR APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTWARE: PATENT.PM

SEQ ID NO 7906

LENGTH: 106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 7907, Application US/09513999C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
TYPE: PRT
ORGANISM: Artificial Sequence
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: synthetic peptide chosen such that it is cleaved by a Botulinum
OTHER INFORMATION: Neurotoxin (BoNT)
FEATURE:
NAME/KEY: MISC_FEATURE

LOCATION: (1)...(17)
OTHER INFORMATION: amide bound at one end of the peptide
US-10-980-346B-37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Sequence 40, Application US/10947071

Sequence 40, Application US/10947071

Publication No. US20060063221A1

GENERAL INFORMATION:
APPLICANT: Williams, Dudley J.
APPLICANT: Gilmore, Marcella
APPLICANT: Steward, Lance
APPLICANT: Verhagen, Marc
TITLE OF INVENTION: Lanthanide-Based Substrates and Methods
TITLE OF INVENTION: For Determining Clostridial Toxin Activity
FILE REFERENCE: 66872-043

CURRENT APPLICATION NUMBER: US/10/947,071

CURRENT FILING DATE: 2004-09-21

NUMBER OF SEQ ID NOS: 101

SOFTWARE: FastSEQ for Windows Version 4.0

CURRENT APPLICATION NUMBER: US/09/942,098

CURRENT FILING DATE: 2001-08-28

NUMBER OF SEQ ID NOS: 96

SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NO 88

LENGTH: 23

TYPE: PROFESTATION: Synthetic peptide

FRATURE:
ORCANISM: Artificial Sequence
FRATURE:
ORCANISM: Artificial Sequence
FRATURE:
ORCANISM: AND RES

LOCATION: 1

OTHER INFORMATION: Xaa=fluorescein-modified lysine
NAME/KEY: MOD_RES

LOCATION: 23

OTHER INFORMATION: Xaa=tetramethylrhodamine-modified lysine
NAME/KEY: AMIDATION

COTHER INFORMATION: at the C-terminal

COTHER INFORMATION: at the C-terminal
